Standard Kt/V Calculations for Patients Who Run More Than 3x/week

**Situation**: Kt/Vs for patients who dialyze more than 3 times per week are not populating in Clarity.

Background: Clarity does not calculate Standard Kt/V for incenter patients who routinely dialyze more than 3x/week. These values are typically calculated in Ascend

Assessment: In order to have this Kt/V value calculate and appear on monthly billing statements a lab test order for **Kt/V Standard, URR (<>3x/wk)** will need to be added in Ascend.

Recommendation: These orders will need to be entered into **Ascend** before August 1 to make sure the Kt/V value gets on the July bill. The orders will need to be back-dated to 7/1/19. A nurse will need to enter Pre and Post Weight and Total Treatment Time (in minutes) into the lab test edit field prior to August 1.

Instructions follow:

- You can add the same order for multiple patients at your facility or individually.

    - To add orders for multiple patients
        - Open Lab Check for your clinic
        - From home screen go to Patients>Batch Orders
        - Check the box next to all the patients who run 4x/week
        - Click on the dropdown arrow for Test
        - Select Kt/V Standard, URR (<>3x/wk)
        - Enter Start Date: 7/1/2019
        - Enter Schedule: Monthly 1st fw W/Th
        - Click Next
        - Enter the ICD code: N18.6
        - Check the Yes radio button for ESRD Related
        - Click Save

- In order for the Standard Kt/V to calculate in Ascend, additional information will need to be entered into the lab test result
    - Go to the home page and click on Missing Draw Info in the Message Center box
    - Find the date of draw and click the Edit button on the far right.
    - The Draw Info Entry screen will open
    - Enter Treatment Time (in minutes), Pre Weight and Post Weight
    - You will need to go to Clarity> Checklist History and open the RTC session for the date of the draw to get this data.
