

Clarity Monthly Update

General Information

The 3rd Sunday of every month Visonex updates Clarity with fixes to issues reported and enhancements based on client feedback. Following is a general overview of those fixes and enhancements that occurred on Sunday, May 17, 2020 and additional changes approved by NKC's Change Control Board.

What's Fixed in Clarity

- 1. An issue was fixed with the Primary Nephrologist Dashboard Page.** If a patient did not have a Dialysis access, the page would not load. The page has now been fixed so it will load regardless if a patient has an active access or not.
- 2. Prescription Medications for Patient Report.** Visonex has updated the report to allow a report preference that can include or exclude Dialysis Medications along with PRN Dialysis Medications. The "Prescription" column was changed to "Details" because it now includes all home medications; including supplements, OTC, Vitamins, etc that the patient is taking.
- 3. General Information form-Clarify when a process updates the information.** Visonex has updated how the Last Updated crosses to the General Information page, Patient Status History and Patient Clinic History. If a user updates a Patient Schedule, Transplant, Hospitalization or Death Information (2746) page, it automatically updates the patient status. This "Last Update" entry will cross to the General Information page, Patient Status History and Patient Clinic History and the "Updated By" will now display as "Automatic Process Update."

Patient Status History List

Status	Comments	Date Changed	Last Updated	Updated By
Received Transplant		04/30/2020 00:00	05/01/2020 06:15	Automatic Process Update
Outpatient Chronic		04/23/2020 23:59	04/24/2020 08:46	Automatic Process Update
Inpatient		04/20/2020 07:45	04/24/2020 08:45	Automatic Process Update

- 4. Fix Data Entry has been disabled for signed orders.** The Fix Data Entry button will no longer be enabled if the order has been signed.
- 5. Update for way Hepatitis B Crosses to CROWNWeb.** Prior to May 17, 2020, the hepatitis B results were sent to CROWNWeb in order from newest to oldest

which caused the dates to appear in the wrong order. This has been corrected so the dates now appear in the correct order.

6. Death Information-Added Cause of Death options. On May 5, 2020, Visonex updated the Death Information (2726) page to display the two new causes of death that CMS recently added. They are:

- a. **Infection-COVID19**
- b. **Infection-COVID19 Unconfirmed**

7. Locked Accounts. Visonex fixed an issue where user accounts were being locked without 6 failed login records within 10 minutes. The problem was attempts were being duplicated.

What's New in Clarity

1. **As of March 15, 2020, the Transplantation Module was completely reconfigured and now consists of 3 separate sections; Transplant Information, Transplant Waitlist and Transplant Workup.** Visonex created the module in order to address a new CMS ESRD QIP measure for "Percentage of Prevalent Patients Waitlisted (PPPW)."
 - a. **Transplant Information** is used to document specific data regarding a kidney transplant and will support more than 1 transplant.
 - b. **Transplant Waitlist** is used to document information on Waitlists and will support multiple waitlists per patient and supports patient progress regarding Waitlist status.
 - c. **Transplant Workup** is used to document a patient's interest, transplant candidate status and progress on workup. Information in this section can only be pulled from assessments.
 - d. NKC has completed the necessary changes to the following checklists/assessments to utilize the 3 transplant sections and document appropriately. **See *Transplant Documentation tip sheet in KNET>Clarity>Tip Sheets* for details.**
 - i. Transplant Assessment
 - ii. Psychosocial Assessment
 - iii. Physician CIA (Splitter)
 - iv. Nursing Assessment (CIA)
 - v. Comprehensive Interdisciplinary Assessment

2. **“Funeral Home” has been added to Patient Contacts.** Funeral Home information will be documented in Patient Contacts. It has been added to the list of options under “Relationship to Patient.”
3. **“Aunt” and “Uncle” were added to Patient Contacts “Relationship to Patient” drop down list.**
