

Clarity Monthly Update August 2020

General Information

The 3rd Sunday of every month Visonex updates Clarity with fixes to issues reported and enhancements based on client feedback. Following is a general overview of those fixes and enhancements included in the August 16, 2020 Update.

What's Fixed in Clarity

1. The **Hemodialysis Setup Report** *Dialysate Temp* will no longer show the extra characters. Also, the ratio of *BFR/DFR* will appear below the values.

After August 16:

BFR/DFR	350/700 (2.00 ratio)	Dialysate Temp(C)	36
---------	-------------------------	-------------------	----

2. **Patient>Patient schedule** – two patients can now be assigned to the same room/station/day if their schedules do not overlap. If another patient has already been assigned to the same room/station for the same period, their name will be displayed with a warning. The schedule will not save.
3. When entering a **Medication Order** without an end date, then going back onto the order, the Calendar is no longer disabled on the discontinue orders section.

What's New in Clarity

1. **Clinic NPI Number** is a new field in Organization>Clinic Information
2. **Real-Time Charting-** each **medication** that is not marked 'given' or 'not given' will trigger a warning message.
3. If you update the Dry Weight in **Treatments>Hemodialysis Prescription**, you can go to **Total Body Water** and click on the 'Calculate' button to display a value.
