

Clarity Monthly Update

March 2021

General Information

The 3rd Sunday of every month Visonex updates Clarity with fixes to issues reported and enhancements based on client feedback. Following is a general overview of those fixes and enhancements that occurred on March 14, 2021.

What's Fixed in Clarity

1. The **Dialysis Prescription** will no longer appear more than once when Add New or the Submit button is clicked multiple times.
2. The odd text character in the Patient Report **E-Signature by Patient** has been removed.
3. The character limit for **Review Lab Culture Results** was not allowing **RTC Nurse Assessment** tab to properly open. This has been resolved.

What's New in Clarity

1. **Janssen COVID-19** (Johnson & Johnson) has been added to the **Immunization** list.
2. The **DataXpress** file was originally configured to display **Total Treatment Time per Treatment** in the Billing Claim. Now, the file is configured *not* to display this value by default. This was in response to a reversal of the CMS requirement. The billing file can be configured to display this value upon request.
