

Adding an Immunization to a Recent, Unbilled Treatment

The primary workflow for documenting an immunization administered in clinic is to chart it as given in a RTC or VM treatment the same day it is given.

In rare circumstances it may be necessary to add an immunization to a recent, unbilled treatment (a treatment that has not had charges processed yet) after the treatment has been posted. You will see these treatments listed in Treatment History.

Go to **Treatment History** and verify a treatment is posted on the date the immunization was given.

If a treatment is not listed there, it is because either:

- The treatment has not yet been posted.
 - Go to Checklist History to see if a tx was created
 - If the tx is listed but not posted, complete charting and then post the tx.
- Or, a treatment was never created.
 - Go to Patient Schedule and add an "Additional One Time Treatment or Visit" appointment if an appt does not already exist for that date.
 - Enter the treatment type as:
 - Home pt: Office Visit
 - InCenter pt: No Treatment/Medication Only

If no treatment exists, you will need to add a treatment in RTC or VM **and then post it.** (You will have to check all of the "Not Done" or "Reviewed" boxes to post the tx.

Once the treatment is posted in Treatment History, go to **Patient>Immunizations**

Patient Allergies: *No Known Allergies -
