

Procedure Updates: Policy & Safety Alerts!

Week Starting: 9/23/2024

Hectorol administration will now only be given post dialyzer via the medication pigtail on the venous chamber, followed by a sterile normal saline flush.

This update removes the option to administer Hectorol via the saline line.

Administration Tips:

- Never use air to push any medication into the venous chamber.
- Hectorol, as with all meds given into the venous chamber, should be followed by a sterile normal saline flush to ensure full delivery of the medication.
