

Clarity Monthly Update

October 2025

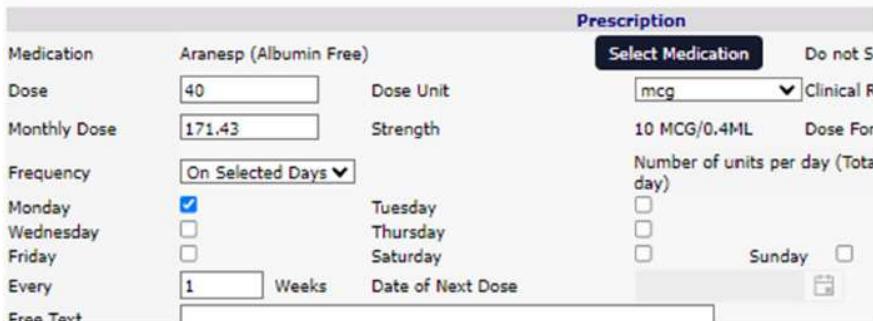

General Information

Renvio regularly updates Clarity with fixes to issues reported and enhancements based on user feedback. The following is a general overview of those fixes and enhancements that will be released on Sunday, October 19, 2025. You will see these updates starting Monday, October 20.

What's New or Fixed in Clarity

1. Medication Orders form – Reports of Slowness

- The Dose field and the Days boxes for On Selected Days had a significant lag when entering information.
- This has been fixed.

The screenshot shows the 'Prescription' section of the Clarity Medication Orders form. It includes fields for Medication (Aranesp (Albumin Free)), Dose (40), Dose Unit (mcg), Monthly Dose (171.43), Strength (10 MCG/0.4ML), Frequency (On Selected Days), and a dropdown for Select Medication. The 'On Selected Days' dropdown is open, showing Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and Sunday, with Monday checked. There are also fields for Every (1 Weeks) and Date of Next Dose.

2. Real-Time Charting – “Treatment is Posted” is no longer appearing in blue

- Renvio fixed an issue preventing the blue acknowledgement that the treatment was posted from appearing in RTC for all posted treatments.

3. Report Wizard – Custom Reports

- Renvio fixed an issue preventing some medications from appearing on custom reports.

4. Patient Checklists – Print Report comes up blank for some patients.

- Renvio fixed an issue preventing any data from displaying when the Print Report button was selected in checklists.

5. Tablo Prescription – Increase Max UF Rate

- Renvio updated the Max UF Rate (mL/hr) in the Tablo prescription form from 10 to 13.

6. Vaccine – Add NDC# and VIS Date

- The NDC# for Flublok trivalent (for patients) and the updated VIS Date were not displaying in the vaccine administration form because CMS had not yet distributed the info.
- This was updated on October 2, 2025.

Clarity Guides and Tip Sheets – On KNET
